

Does One-and-One Make Two?

Michele is a 60% free-throw shooter and is in a one-and-one situation.

(A team is in a one-and-one situation when the opposing team has collected a total of 7 fouls. In a one-and-one situation, each time the team attempts a free throw, they will get a second free throw if they make the first one.)

If Michele is at the free-throw line in a one-and-one situation, is she most likely to score 0 points, 1 point, or 2 points?
