

Rollin' Along Activity A

At the annual Mayberry Motor Show,
Andy counted a total of 36 motorcycles and cars.
Together the vehicles have a total of 112 wheels.
How many motorcycles and how many cars were at the
show?

What a Dream!

One night Suzy dreamed she was on another planet,
and some very strange looking creatures lived there.
In her school on this strange planet, there were quite a
few purple and green creatures. The purple
creatures had four arms each, while the green ones
had two arms each. Suzy somehow figured out that
there were a total of 112 arms in the school, not
including hers!

Just when she had figured out how many of each kind of
creatures there were, Suzy's alarm clock went off,
and she couldn't remember the answer! Can you
help her?
